Introduction

Welcome to the Cúram 8.2.0.0 iFix4 release.

This is a cumulative release that incorporates all improvements, resolved issues, and third-party updates in previous 8.2.0.0 iFix releases. For full details, see the release notes for each of the previous iFix releases online at [Release Notes](#).

For product documentation, see [Merative Support Docs](#).

System Requirements

For information about the supported software for this release, see the [Prerequisites and supported software](#).

[Back to top](#)

Download

This release is available to download from [Merative Support](#). You must log in to download software, request access if needed. Select Cúram Support and Software Download, enter your credentials and download the software.

Verify Download Integrity (SHA-256 Checksums)

To ensure the integrity of your downloaded files:

1. Download the file(s) from the links provided above.
2. Generate the SHA-256 checksum for the downloaded file using a tool such as shasum or certutil. For example:
 - On Linux, run shasum -a 256 <filename> in the Terminal.
 - On Windows, run certutil -hashfile <filename> SHA256 in the Command Prompt.
3. Compare the generated checksum with the corresponding value in the table below.
4. If the checksums match exactly, the file is authentic and has not been tampered with.

Java8

Java8 ZipName	SHA-256 Checksum
Curam8200iFix4_Java8.zip	880a6699fcf914cd9df1728d83dbd8a2fe4651ac5cb879eb18d13326ca194de8

ModernJava

ModernJava ZipName	SHA-256 Checksum

Security Bulletins

Security Bulletins and documentation for system-generated Tasks & Notifications are now available via the [Merative Support Portal](#).

To access:

- Log in to Merative Support
- Enter your credentials
- Navigate to Knowledge Base, then Article Search, select "Curam Knowledge" as the Data Category Group and then select the relevant Data Category.

If you don't yet have access, please submit a request through the portal.

Installation

For full installation instructions, see the Development Environment Installation Guide at [Product Documentation and PDFs](#).

The basic installation steps are as follows:

- Review the release notes and documentation for any prerequisite steps.
- Download and extract the contents of the .zip file to a local drive location.
- Ensure that all files in your Cúram installation are writable.
- Run any appropriate preinstall steps outlined in the Release Notes.
- Run the Cúram installer, which you can find in the INSTALLER folder.
- Run any appropriate post-install steps outlined in the Release Notes.
- Run the appropriate build targets for your installation.

Administration

Batch Processing

DT037494, WorkItem:SPM-154187 - Batch streamer does not stop or exit when the chunker has no data

Issue Description:

When the chunker for a batch job does not generate any chunks, the streamer(s) do not exit.

User Interface Impact: No

Steps to Reproduce:

1. Start a batch streamer and wait for it to fully initialize.
2. Start the corresponding chunker, ensuring that the parameters or underlying data will cause it to process no records.
3. The chunker will initialize, produce no chunks, and then exit normally.
4. Issue: The streamer(s) will not exit and must be terminated manually, or will terminate normally once the corresponding chunker produces one or more chunks for the job.

Resolution:

Batch streamers now exit normally once their chunker completes the batch run, regardless of whether the batch run produces zero chunks.

Known Issues

Please refer to the [Known Issues documented for 8.2.0.0](#).
